

# How to reinstall OS X

1. Open Disk Utility from the OS X Utilities window, then [use Disk Utility to erase your built-in hard disk](#) (using the OS X Extended format)

**Note:** We suggest you to buy our [PA-2013-USB3380C](#) or [PA-U3M2PCE](#) to erase the NGFF SSD in your macbook first. If you have desktop with MAC OS, then you can buy cheaper PCIe 4X adapter: [ST-M2PCE4X](#).

2. Pls prepare USB disk boot driver if you have no USB install driver.
3. Open back cover with yellow screw driver.

4. Replace Macbook PCIe SSD with M.2 PCIe SSD+ST-NGFF2013 card by black screw driver.

5. Holding down Option, power on Macbook, then run the USB boot driver .

6. Select formatted M.2 SSD to install Mac OS :

7. The installation begins.

8. After installation, you can use MAC OS X at once.
